

# WVA - WEB SEVA DRIVE

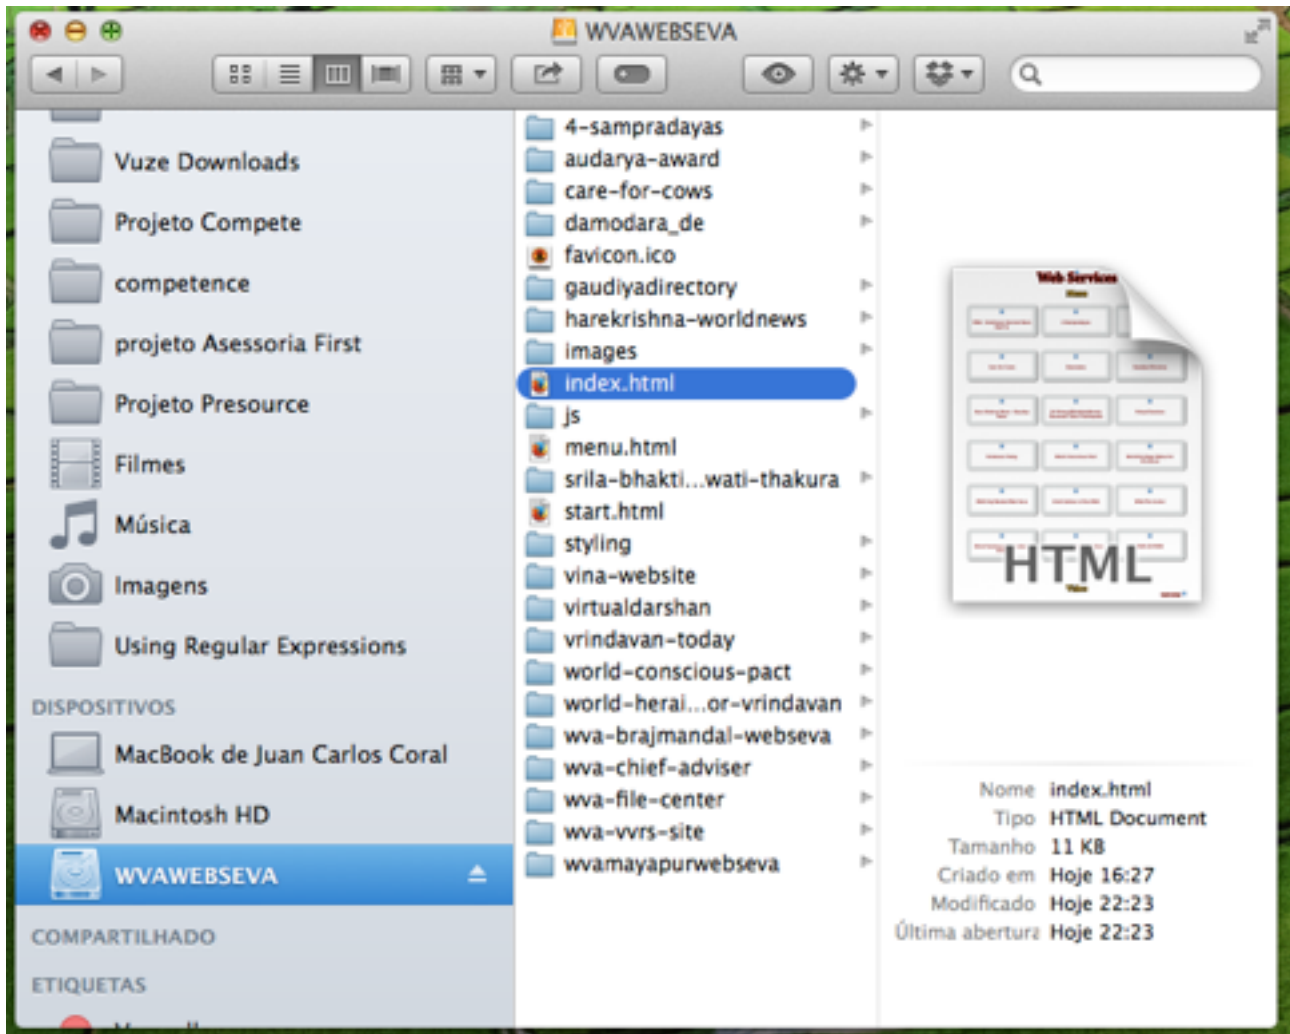

How to use it?

1.

Open the Sticky Drive or Penndrive.

2.

When the file explorer opens in the main directory of the drive, click on the **index.html**, **menu.html**, or **start.html** so that the web-explorer reads the Inicial menu page.

3.

From that point you can simply navigate thru all the present pages using the web explorer.

It is highly recommended to use modern web browsers like **Mozilla Firefox**, **Google Chrome**, **Mac os x Safari** or **Opera** for an optimal user experience.

If you want to open the drive's general menu page with a browser different from the computers default web browser, you just have to make a right-click on one of the already named files, and choose "open with...", and then choose the browser you want to navigate with.
